SEWAGE PUMP CATALOGUE

PURITY PUMP CO.,LTD

COMMITTED TO BECOMING
THE LEADER OF
ENERGY-SAVING
INDUSTRIAL PUMPS

Purity Pump Co., Ltd. is a specialized manufacturer and supplier of high-quality industrial pumps, exporting to global market in competitive prices. Our main products are centrifugal pumps, fire pumps and system, inline pumps and multistage jockey pumps.

Purity Pump was founded in 1998, headquartered in Wenling (Zhejiang, China), equipped with professional lathe, punching machine, water testing apparatus, spray-painting plant, etc. Purity has over 200 employees, around 10% of whom are engaged in research and development.

Purity is consisting of R&D institute, main factory, machine workshop, rotor workshop, showroom in Wenling city, and one branch in Shanghai.

Our products and services have been deployed in more than 50 countries. And we supply water pumps for many large projects like National Olympic Stadium. We also supply centrifugal and fire pumps to some well-known pump companies all over the world.

Aimed to "Life From Purity", with the tenet of 'innovation, high quality, customer satisfaction', we are striving for the top-ranking brand of industrial pumps.

Purity Pump Co., Ltd. is a professional enterprise integrating R & D, production and sales of energy saving industrial pipeline pumps, centrifugal pumps, sewage pumps, fire pumps, non-negative pressure water supply and intelligent water systems.

PURITY Pump Industry Co., Ltd. is a modern professional manufacturer integrating R&D, production and sales of pipeline pumps, centrifugal pumps, sewage pumps, fire pumps, non-negative pressure water supply and smart water systems.

We are committed to the Exploration of pump industry
And provide professional product Solutions for customers

SUBMERSIBLE SEWAGE PUMP

WQ

submersible sewage pump

0.75 ~ 7.5kW / 50Hz: 3000rpm

Conditions of Use

- Insulation class: F
- Protection class: IP68
- Water temperature: 0-40°C
- PH value: 6-10
- Medium density: $\leq 1.3\text{g/cm}^3$
- Power supply: Single-phase 220V $\pm 10\%$, 50Hz
Three-phase 380V $\pm 10\%$, 50Hz
- Thermal Protector: Built-in
- Maximum capacity: 150m³/h
- Maximum head: 60m
- Cable length: 8m

Application Environment

- The altitude does not exceed 1000m.
- During operation, the product must be completely immersed in water, but the diving depth shall not exceed 5m.
- It can transport acidic, alkaline or other corrosive sewage.
- It can be used in chemical, petroleum, light industry, food, pharmaceutical, brewing, environmental protection, sewage treatment and other industries.

Application Environment

Structure and Features

1. The double-blade impeller structure is adopted, which greatly improves the dirt passing capacity, and can effectively pass through fibrous substances and solid particles;
2. The overall structure is compact, the volume is small, the noise is low, the energy saving effect is remarkable, and the maintenance is convenient. There is no need to build a pump room, and it can work by submerging in the water, which greatly reduces the engineering cost;
3. The cable is filled with epoxy glue, which can effectively prevent water vapor from entering the inside of the motor, or immersing in water due to a broken cable, causing water to enter the inside of the motor along the crack;
4. The electric pump is equipped with a thermal protector, which can automatically disconnect the power supply to protect the motor in case of phase loss, overload, motor overheating, etc;
5. The mechanical seal adopts reasonable hard and corrosion-resistant materials, which greatly improves the service life of the pump;
6. The "O" type oil-resistant rubber sealing ring is used for the static seal at each fixed stop;
7. The lifting rings and screws in contact with water are all made of stainless steel 304, which is conducive to the maintenance and disassembly of the electric pump;
8. The insulation grade of the motor is F, and the designed output power has sufficient margin, and the whole series of electric pumps can operate at the full head.

0.75 ~ 7.5kW / 50Hz: 3000rpm

CUTTING SUBMERSIBLE SEWAGE PUMP

BREAKDOWN DIAGRAM

WQ-QG CUTTING
SUBMERSIBLE SEWAGE PUMP

WQ-QG

Cutting submersible sewage pump

0.75~7.5kW / 50Hz: 3000rpm

Model Description

- Insulation class: F
- Protection class: IP68
- Water temperature: 0-40°C
- PH value: 6-10
- Medium density: $\leq 1.3\text{g/cm}^3$
- Power supply: Single-phase 380V $\pm 10\%$, 50Hz
Three-phase 380V $\pm 10\%$, 50Hz
- Thermal Protector: Built-in
- Maximum flow 45m³/h
- Maximum distance: 36m
- Cable length: 8m

Application conditions

- Wastewater discharge in factories, shopping malls, hospitals, hotels
- Residential area, parking lot, municipal sewage, rainwater drainage
- Sewage discharge from sewage treatment plants and livestock farms
- Pumping of mud and grey water in construction sites and mines
- Clear water tank pumping for agriculture and aquaculture
- Wastewater discharge from biogas digesters
- Water supply and drainage in other occasions

Model Description

Structure and Features

1. It adopts helical structure and impeller with sharp edge, and performs shearing action with the cutter head. The impeller adopts the backward angle of inclination, which can effectively prevent the blockage of the sewage pipeline. Through the rotation of the impeller, the dirt is sucked into the impeller and the cutter disc is cut, and sent out of the pump cavity to realize the non-clogging characteristic;
2. The overall structure is compact, the volume is small, the noise is low, the energy-saving effect is remarkable, and the maintenance is convenient. There is no need to build a pump room, and it can work by diving into the water, which greatly reduces the project cost;
3. The cable is filled with epoxy glue, which can effectively prevent the water vapor from entering the motor or the water entering the motor along the crack due to the cable being immersed in water;
4. The electric pump is equipped with a thermal protector, which can automatically disconnect the power supply to protect the motor in the event of phase loss, overload, and motor overheating of the electric pump;
5. The mechanical seal adopts reasonable hard and corrosion-resistant materials, which greatly improves the service life of the pump;
6. The "O" type oil-resistant rubber sealing ring is used for static sealing at each fixed stop;
7. The lifting rings and screws in contact with water are all made of stainless steel 304, which is conducive to the maintenance and disassembly of the electric pump;
8. The motor insulation grade is F, the designed output power has sufficient margin, and the whole series of electric pumps can run at full head.

JYWQ

STIRRED SEWAGE SUBMERSIBLE PUMP

JYWQ

Stirred sewage submersible pump
0.75 ~ 7.5kW/50Hz: 3000rpm

Conditions of Use

Water temperature: 0-40C
PH value: 6~10
Medium density: ≤1.3g/cm
Power supply: single-phase 220V±10%, 50Hz
Three-phase 380V±10%, 50H1z
Thermal protector: built-in
Maximum flow: 149.2
Maximum lift: 55.5m
Cable length: 8 meters

Application conditions

Wastewater discharge in factories, shopping malls, hospitals, hotels
Residential area, parking lot, municipal sewage, rainwater drainage ·
Sewage discharge from sewage treatment plants and livestock farms
Pumping of mud and grey water in construction sites and mines
Clear water tank pumping for agriculture and aquaculture
Wastewater discharge from biogas digesters
Water supply and drainage in other occasions

Model Description

Structure and Features

1. JYWQ stirring sewage and sewage submersible electric pump consists of three parts: water pump, seal and motor. The water pump is located in the lower part, and the base is equipped with a stirring impeller, which can generate a strong stirring force during operation. The sediment in the pool is stirred into a suspended substance and then sucked into the impeller to discharge, so as to achieve the effect of dredging;
2. The overall structure is compact, small in size, and noise. Small size, significant energy-saving effect, easy maintenance, no need to build a pump room, can work by diving into the water, greatly reducing the project cost;
3. The cable is filled with epoxy glue, which can effectively prevent moisture from entering the motor or due to cable breakage. Immersion in water causes water to enter the motor along the crack;
4. The electric pump is equipped with a thermal protector, which can automatically disconnect the power supply to protect the motor in the event of phase loss, overload, and motor overheating of the electric pump;
5. The mechanical seal adopts reasonable hard and corrosion-resistant materials, which greatly improves the service life of the pump;
6. The "O" type oil-resistant rubber sealing ring is used for the static seal at each fixed stop;
7. The lifting rings and screws in contact with water are all made of stainless steel 304, which is conducive to the maintenance and disassembly of the electric pump;
8. The insulation grade of the motor is F, and the designed output power has sufficient margin, and the whole series of electric pumps can run at the full head.

PIPELINE HEAD LOSS TABLE

Selection of pumps and pipes:

1. Head: The head marked on the pump nameplate is the value without deducting the frictional resistance loss of the pipeline. When calculating the field head, we should measure the vertical height from the water surface at the lowest water level of the well to the highest point of the outlet pipeline (when the water level of the water tower is higher than the highest point of the pipeline, it is calculated according to the highest water level of the water tower), plus the head loss caused by the pipeline, and then select a suitable pump.

2. Piping inner diameter: The hydraulic loss of the pipeline is related to the inner diameter, length and inner wall roughness of the pipeline. The thinner the pipe diameter, the longer the pipeline and the coarser the inner wall, the greater the hydraulic loss of the pipeline. The inner diameter of the piping of the pump is designed according to the flow, flow rate and other parameters. When in use, increasing the pipe diameter will increase the cost, and changing the small pipe diameter will increase the head loss.

COUPLER

The flange of the electric pump conforms to the ISO7005-92 standard.

Sewage pumps with standard flanges can be connected directly to this coupler unit.

ACCESSORIES

- Coupler seat
- Coupler block
- Upper guide rod frame
- Internal thread flange (≤4")
(excluding guide rod, expansion screw, chain assembly and other components)
